

# How to Disable / Enable App Notifications on Windows 10

Follow few steps below to get the Apps Notifications on/off manually to save net data.

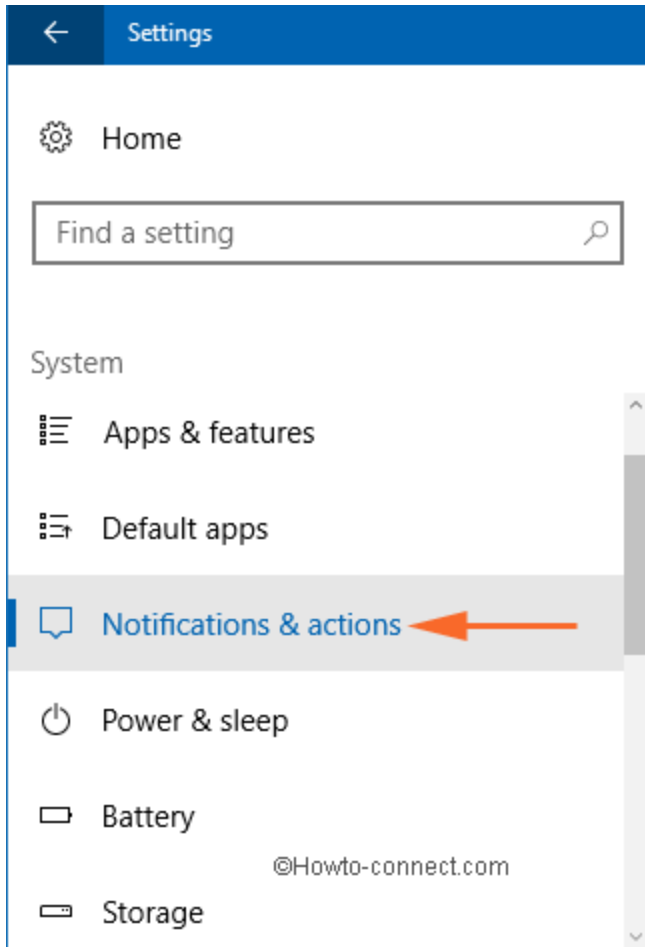

1. Open **Start menu** and click **Settings** on your system.

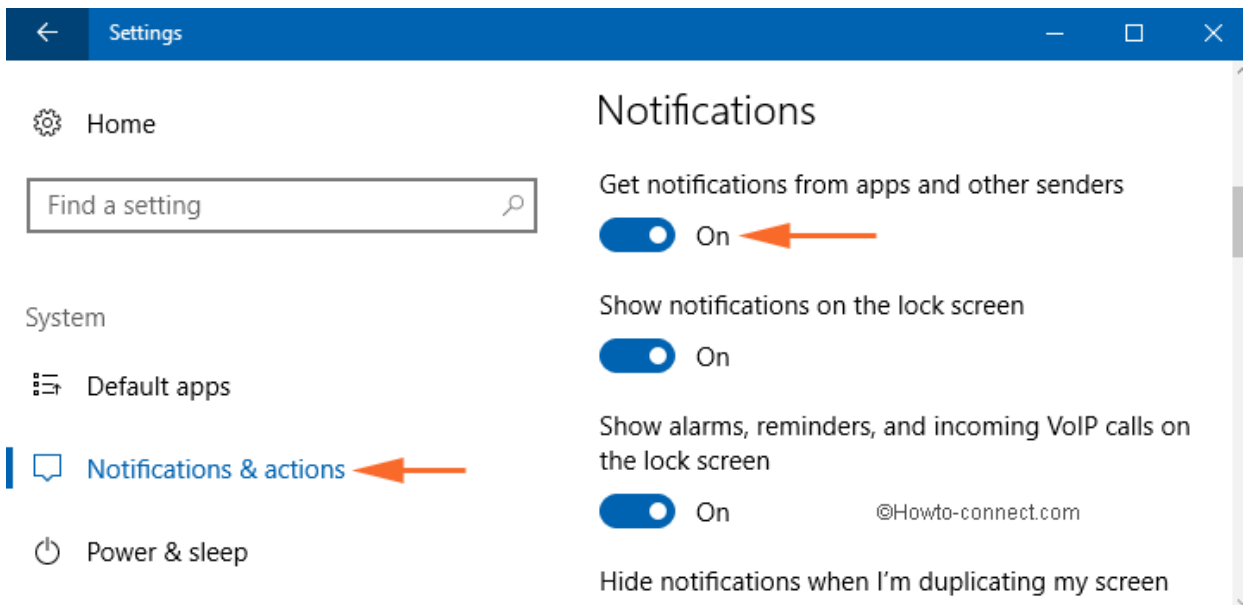

2. Click **System** option on the Settings Window.

3. In the left pane, you see the **Notifications & actions** as in the figure below. Hit on that.

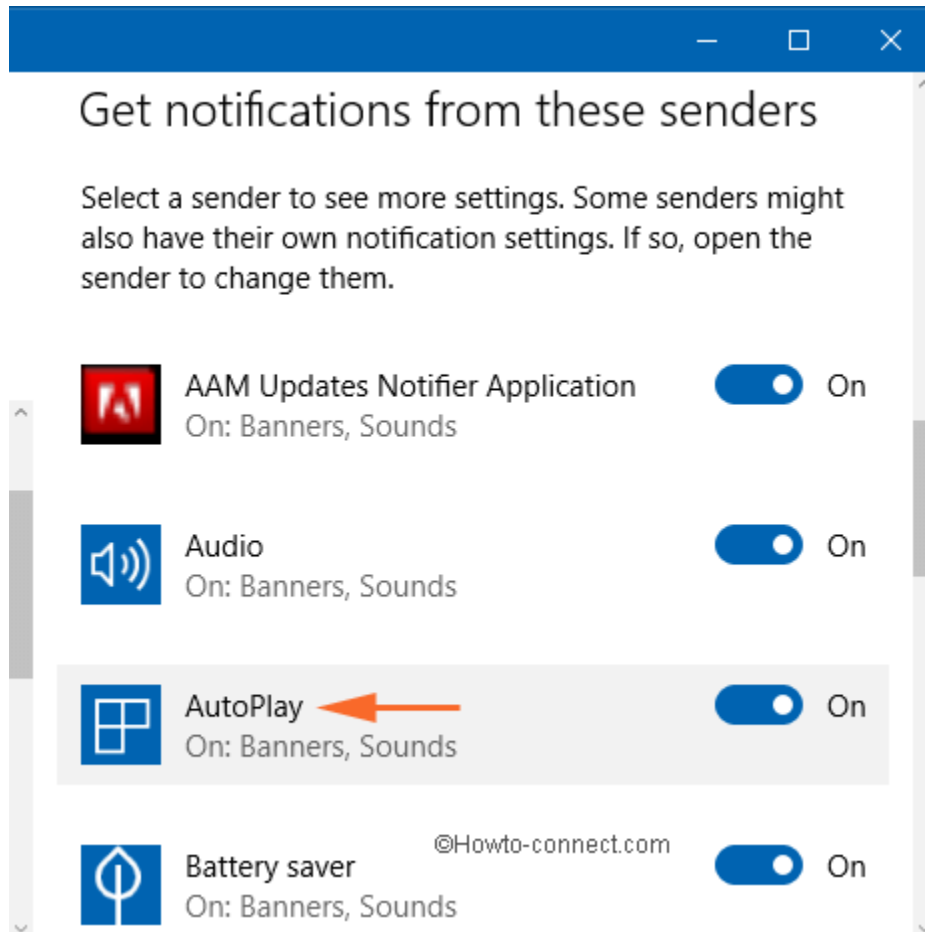

4. On the right pane, locate the setting **Get notifications from apps and other senders**. To disable/enable notifications for all apps, toggle **OFF/ON** this setting.

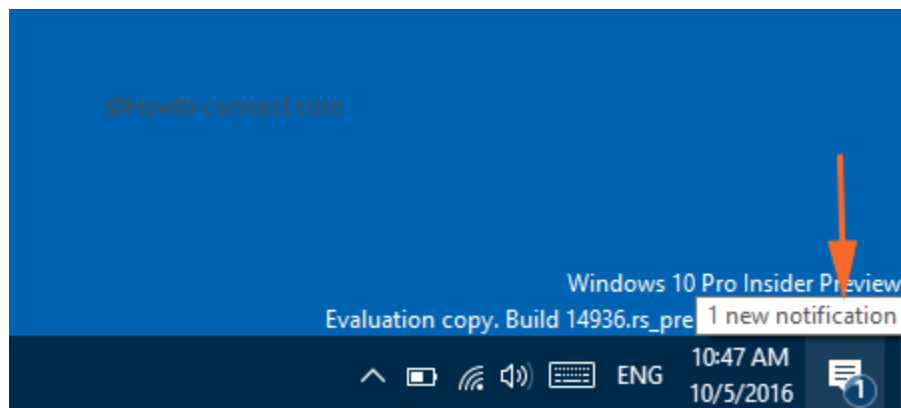

5. On the lower half of the right pane, you will see the list of apps that will send you the notifications.

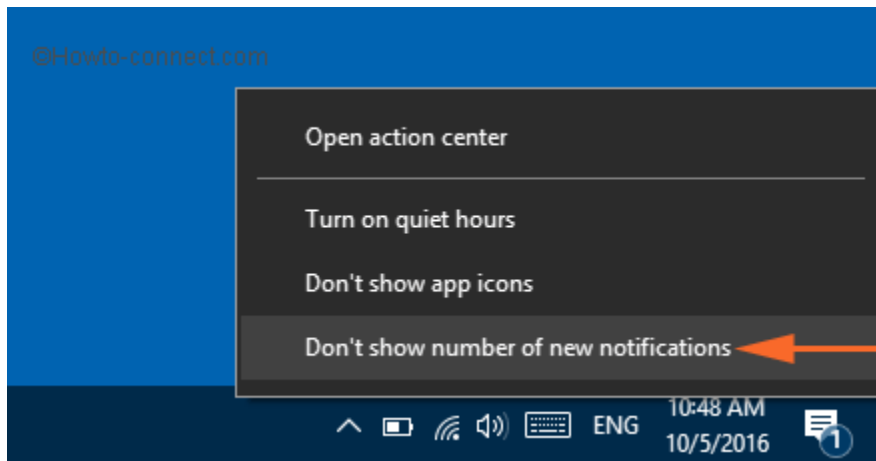

6. Click on any specific app and more options will come into light.

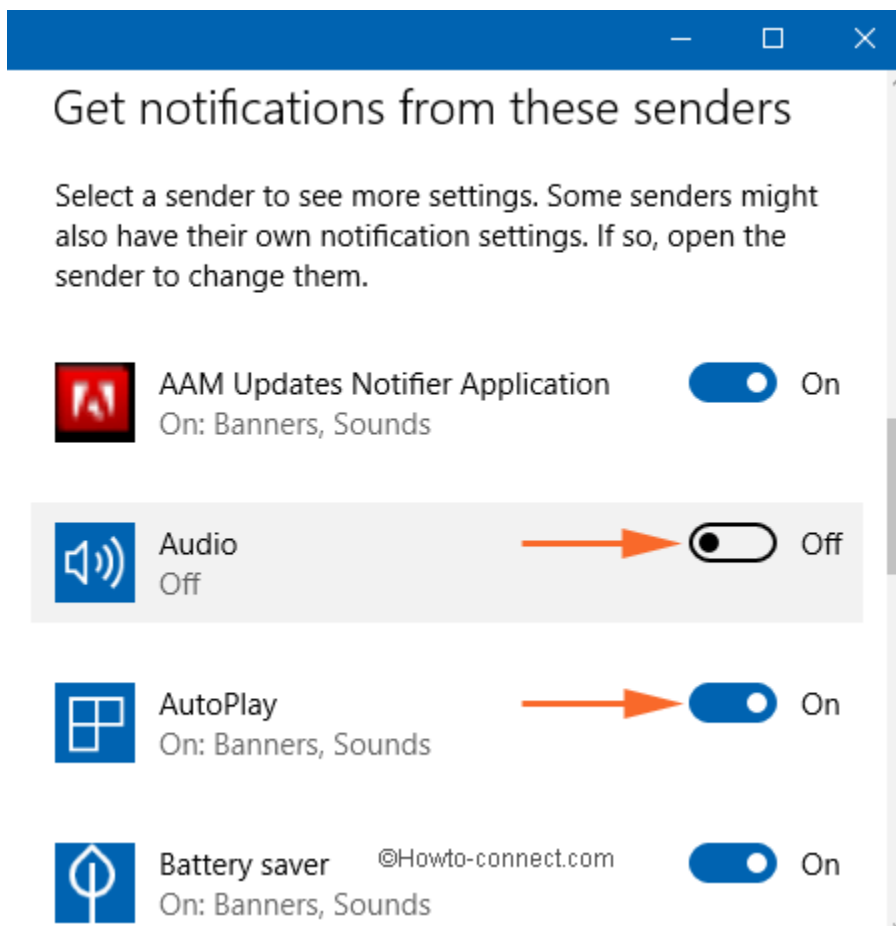

7. Additionally, the notification icon in the taskbar shows the number of new notifications on it.

8. So, if you don't want the icon to show those new notifications, right-click on the notification icon on the taskbar and click "Don't show number of new notifications".

Note: You can also Turn On/Off notifications separately for particular apps. For example, if you want to stop notifications for only audio then find Audio and toggle off while it is on.

Similarly, you can do it for other apps.

So you can easily Disable / Enable App Notifications on Windows 10.
