

POP/IMAP on an iPhone

Step 1: Enter your information

Name
Email Address
Password
Description

A screenshot of an iPhone's 'New Account' setup screen. The screen shows a form with the following fields: Name (Gaggle Test), Address (edc@gaggle.net), Password (represented by dots), and Description (edc@gaggle.net). The keyboard is visible below the form.

Step 2: Choose IMAP or POP

POP downloads new messages while IMAP synchronizes your mailbox functions. Both POP and IMAP advantages are listed below after the step by step setup instructions

A screenshot of an iPhone's 'New Account' setup screen. The screen shows two radio buttons for selecting the protocol: IMAP (selected) and POP. Below the radio buttons are the same form fields as in Step 1: Name (Gaggle Test), Address (edc@gaggle.net), and Description (edc@gaggle.net). The keyboard is visible below the form.

Step 3: Enter Incoming Server Information

Incoming Mail Server

Host Name (server name – pop3.gaggle.net OR imap.gaggle.net)

User Name (Full Email Address)

Password (not optional)

Step 4: Enter Outgoing Server Information

Host Name (server name – smtp.gaggle.net)

User Name (Full Email Address, not optional)

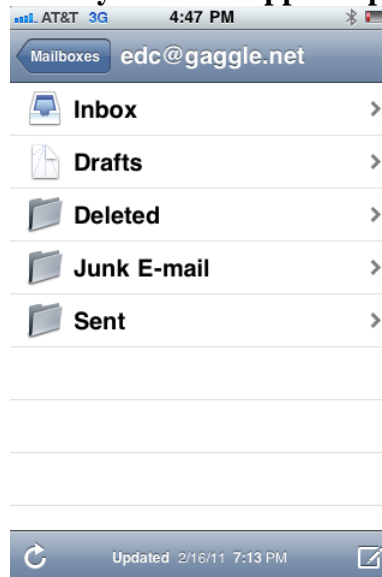

Password (not optional)

Step 5: Turn Mail feature ON

Step 6: Go to your Mail App and pull mail

Step 6: Go back to Account Settings and click Advance

Step 7: Save Mailbox Behaviors to the phone

If prompted to turn SSL off, please change your ports from the Advance settings.
POP3: Secure Port – 995 Regular Port – 110
IMAP: Secure Port – 993 Regular Port – 143

POP vs IMAP:

POP3 Advantages:

- Every time you check your mail, you only receive new email from the server
- Storage is conserved since email does not store on the server, unless you choose to leave a copy, and in which case you can have it automatically removed after a certain amount of days
- There is not a maximum size on your mailbox, except as determined by the size of your hard drive.

IMAP Advantages:

- Email is stored on the server, along with a record of whether you have read, replied to, or deleted a message
- Allows for the synchronizing of folders
